

Project Title: Swiggy Sales Data Analysis

Project Overview -

Swiggy is a massive food delivery app. To make better business decisions, the leadership team needs a clear view of how the company is performing. The goal of this project is to take raw sales data and turn it into an easy-to-use visual dashboard. This dashboard will help managers see exactly where sales are growing, what food people love, and where customer satisfaction needs improvement.

The Problem -

Right now, Swiggy has millions of rows of data, but it is hard to read in its raw form. Managers cannot easily see:

- Which days or months are the busiest.
- Which states or cities bring in the most money.
- Whether people prefer Veg or Non-Veg food.

This project creates a single, clean dashboard to answer all these questions instantly.

What We Are Measuring (Core KPIs)

- **Total Sales:** The total amount of money made from all food orders.
 - **Total Orders:** The actual number of food boxes/orders delivered to customers.
 - **Average Order Value (AOV):** The average amount of money a customer spends on a single order.
 - **Average Rating:** The average star rating given by customers to see if they are happy.
 - **Ratings Count:** The total number of reviews left by customers to check how active the feedback is.
-

The Charts We Need to Build

1. Time Trends (When do people buy?)

- **Monthly Sales:** A line chart showing which months bring in the most revenue (spots holiday or seasonal peaks).
- **Weekly Sales:** A graph to see if orders stay steady or change week by week.
- **Daily Sales:** A bar chart showing the busiest days of the week (spots weekend spikes).

2. Food & Time Summaries (What and when?)

- **Veg vs. Non-Veg:** A simple pie or donut chart showing which food category brings in more money.
- **Quarterly Performance:** A clean table summarizing Sales, Ratings, and Orders for every 3 months of the year.

3. Geography (Where is the money coming from?)

- **Sales by State:** A colourful map of India showing which states order the most food.
- **Top 5 Cities:** A simple list or bar chart showing the 5 champion cities making the most profit.
