

Swiggy Sales Data Analysis Dashboard

1. Introduction

Swiggy is one of India's largest food delivery platforms. Every single day, millions of people use the app to order meals, generating huge amounts of transactional data. While this data holds valuable secrets about customer habits, looking at millions of raw rows makes it impossible to see the big picture. This project uses Microsoft Excel to clean, process, and transform that messy data into a clean, visual dashboard that any business manager can read in seconds.

2. Project Objective

The main goal is to build a centralized Excel dashboard that answers three critical business questions:

- **When do people buy?** Tracking daily, weekly, and monthly ordering patterns to manage delivery partner schedules.
 - **What do people love?** Comparing Vegetarian vs. Non-Vegetarian revenue to optimize restaurant onboarding.
 - **Where is the growth?** Pinpointing the top-performing states and cities across India to spend marketing budgets wisely.
-

3. Dataset Profile

The analysis is built on a massive, robust operational dataset with the following structure:

- **Total Rows:** 197,430 rows (representing individual dish orders).
- **Total Columns:** 10 columns.

- **Key Columns Used:** Order Date, Dish Name, Item Price, Customer Rating, Food Type (Veg/Non-Veg), City, State, etc.
-

4. Data Cleaning & Preparation

Before building any charts, the raw data was refined in Excel using these steps to ensure perfect accuracy:

- **Removing Duplicates:** Scanned and removed any accidental duplicate rows.
 - **Handling Blanks:** Filled or isolated blank spaces in the customer feedback column so they wouldn't ruin the final average rating.
 - **Fixing Formats:** Converted dates from plain text into true Excel Date formats to allow for proper monthly and daily grouping.
 - **Creating Calculated Columns:** Used Excel formulas to extract the **Day Name** (e.g., Sunday, Monday) and **Quarter** from the main order dates.
-

5. Dashboard Metrics & Core KPIs

The dashboard tracks 5 main health cards at the very top to give an instant business snapshot:

- **Total Sales: ₹53.01 Million** (The total gross revenue generated).
- **Total Orders: 197.43K** (Total food dishes delivered).
- **Average Order Value (AOV): ₹268.51** (The average amount spent per order).
- **Average Rating: 4.34 Stars** (Overall customer satisfaction score).
- **Ratings Count: 5.59 Million** (Total volume of reviews submitted by users).

6. Visualization & Key Charts

The data was broken down using Excel Pivot Tables and transformed into the following visuals:

A. Time Trends

- Monthly Sales (Line Chart):** Tracks performance from January to August. January and August saw peak sales at ₹6.8M, while February dipped to its lowest at ₹6.3M.

- **Daily Sales (Column Chart):** Highlights weekly demand. Orders remain incredibly steady during the week, peaking over the weekend on Saturdays at ₹7.8M.

- **Weekly Analysis:** Breaks down performance across the 36 individual weeks of the year to spot operational consistency.

B. Product & Time Summaries

- Veg vs. Non-Veg (Donut Chart):** Shows customer preferences. Vegetarian food is the clear winner, bringing in ₹33.3M (approx. 63%), compared to ₹19.7M for Non-Vegetarian food.

- Quarterly Performance Scorecard:** A matrix tracking growth. Q2 was the strongest quarter with ₹19.9M in sales and 74.2K orders.

Quarter	Sales	Rating	Orders
Q1	₹ 19.7M	4.34	73.1K
Q2	₹ 19.9M	4.34	74.2K
Q3	₹ 13.4M	4.34	50.2K

C. Geography

- Sales by State (Geographic Heat Map):** A color-coded map of India showing sales density. Southern states like Karnataka show intense ordering activity.

- **Top 5 Cities (Horizontal Bar Chart):** Ranks the highest revenue-generating cities. **Bengaluru is the absolute champion** driving **₹5.5M** in sales, followed by Lucknow (₹3.1M), Mumbai (₹3.0M), Hyderabad (₹3.0M), and New Delhi (₹2.8M).

7. Key Business Insights

- **The Veg Opportunity:** Nearly two-thirds of Swiggy's revenue in this dataset comes from Vegetarian dishes.
 - **Bengaluru is the Core Engine:** Bengaluru alone generates more revenue (₹5.5M) than Lucknow and New Delhi combined.
 - **Weekend Surge Dynamics:** Saturday is the highest revenue-earning day (₹7.8M), while Monday and Tuesday are the slowest (₹7.4M).
 - **Consistent Satisfaction:** The average customer rating stays completely flat at a healthy **4.34** across all quarters, showing that food and delivery quality remain steady even as order volume changes.
-

8. Strategic Recommendations

- **Targeted Merchant Onboarding:** Since Veg food drives 63% of sales, Swiggy's onboarding team should aggressively partner with more premium vegetarian restaurants, especially in high-volume zones.
 - **Hyper-Local Marketing:** Allocate a larger portion of the ad budget to Bengaluru to maintain market dominance, while launching targeted promotional campaigns in New Delhi to catch up with other tier-1 cities.
 - **Weekend Rider Management:** Introduce targeted bonuses for delivery partners on Saturdays to ensure there are enough riders on the road to handle the weekend surge.
 - **Boost Low-AOV Cities:** Introduce "Bundle Deals" or "Buy 1 Get 1 Free" offers on slower weekdays (Mondays and Tuesdays) to push the Average Order Value higher.
-

9. Conclusion

This Excel project successfully takes close to 200,000 messy rows of food data and turns them into clean, actionable business strategies. The dashboard proves that Swiggy has strong customer satisfaction (4.34 rating) and a dominant market footprint in Bengaluru. By acting on these visual insights—like pushing vegetarian choices and scaling up weekend delivery fleets—Swiggy can continue to increase its profit margins and scale smoothly.
